**Supplementary Table S3.** Muscle biopsy variables retrieved by the SLR and number of studies including them.

	N studies using variable for definition (Q1)	N studies using assessing variable performance (Q2)	Total (n= 11)
<b>NECROSIS/REGENERATION</b>			
Perifascicular necrosis	2	3	5
Diffuse necrosis	3	2	5
perimysial necrosis/regeneration	0	1	1
perivascular necrosis/regeneration	0	1	1
perifascicular mitochondrial dysfunction	0	1	1
<b>INFLAMMATION</b>			
perimysial inflammation	1	3	4
perivascular inflammation	0	2	2
endomysial inflammation	1	3	4
<b>ATROPHY/FRAGMENTATION</b>			
perimysial fragmentation	0	4	4
perifascicular atrophy	0	6	6
diffuse atrophy	0	1	1
<b>MHC/C5B-9 EXPRESSION</b>			
MHC I diffuse expression	1	3	4
MHC I perifascicular expression	0	1	1
MHC II diffuse expression	0	1	1
C5b-9 diffuse expression	1	2	3
C5b-9 perifascicular expression	0	2	2
<b>OTHER FINDINGS</b>			
microinfarcts	0	1	1
ischemic myosinolysis*	0	1	1
actin filament inclusion	0	1	1
mitochondrial dysfunction	0	3	3
MxA sarcoplasmic expression	0	1	1
RIG-1 expression	0	1	1

\*defined as punched-out vacuoles or myofibrillar rarefaction areas, corresponding to foci of myosin filament proteolysis.

**Supplementary Fig. S1.** Histogram of HRCT findings used in ASSD definition.

**Supplementary Table S4.** Summary of findings – Q1 How has ASSD been defined in the available literature?

RoB: risk of bias; DM: dermatomyositis; PM: polymyositis; GGO: ground glass opacification; NSIP: nonspecific interstitial pneumonia; OP: organizing pneumonia; ILD: interstitial lung disease; HRCT: high resolution computed tomography; PFT: pulmonary function test; ARS: aminoacyl tRNA synthetase; ATS: American thoracic society; UIP: usual interstitial pneumonia; LIP: lymphocytic interstitial pneumonia; CK: creatinine kinase; RP: Raynaud's phenomenon; MH: mechanic's hands; EMG: electromyography; MRI: magnetic resonance imaging.

The Risk of Bias was evaluated by the Newcastle-Ottawa Scale for cohort studies or case-control studies, according to study design. S: Selection Items; C: comparability items; O: Outcome items. The symbol “\*” indicates the score for each component of the scale. §: risk of bias assessed by QUADAS-2.
