Rituximab, n (%)	-0.003 (1-1)	0.99	-19 (-92-54)	0.61

Beta coefficients are expressed using HOMA2-IR and HOMA2-B% as the dependent variables.

HOMA2-IR is calculated using insulin and glucose serum levels; HOMA2-B% is calculated with circulating C peptide and glucose.

SLEDAI-2K categories were defined as: 0 no activity; 1-5 mild; 6-10 moderate; >10 high activity.

ENA: extractable nuclear antibodies; ACA: anticardiolipin antibodies; SLEDAI-2K: Systemic Lupus Erythematosus

Disease Activity Index; SDI: Systemic Lupus International Collaborating Clinics/American College of Rheumatology

Damage Index. SLEDAI-2K: Systemic Lupus Erythematosus Disease Activity Index.

Significant p-values are depicted in bold.

**Supplementary Table S2.** Demographics and disease-related data differences between SLE patients with and without metabolic syndrome.

In 2 patients out of 225 NCEP criteria for metabolic syndrome could not be calculated.

Data represent means ± SD or median (interquartile range) when data were not normally distributed.

SLEDAI-2K categories were defined as: 0 no activity; 1-5 mild; 6-10 moderate; &gt;10 high activity.

ENA: extractable nuclear antibodies; ACA: anticardiolipin antibodies. SLEDAI-2K: Systemic Lupus Erythematosus Disease Activity Index; SDI: Systemic Lupus International Collaborating Clinics/American College of Rheumatology Damage Index.

HOMA2-IR is calculated using insulin and glucose serum levels; HOMA2-B% is calculated with circulating C peptide and glucose.

Significant *p*-values are depicted in bold.
