

JAK inhibitors in combination with anti-TNF drugs on difficult-to-treat chronic polyarthritis: a case series

S. Leal, J. Ivorra-Cortés, M. De La Rubia-Navarro, C. Pávez-Perales, C. Riesco-Bárcena, J.A. Román-Ivorra

Supplementary material

Supplementary Fig. S1. A: C-reactive protein (CRP), B: erythrocyte sedimentation rate (ESR), C: Composite activity measures (BASDAI for patient A, DAS-28 for patients B and C) during the successive visits since combination therapy initiation.

Shaded red areas indicate time periods when treatment had to be stopped. Flare-ups of the disease tended to occur during these periods.
