**Supplementary Fig. S1.** The most valuable predictors of RP-ILD in IIM-ILD patients were selected using LASSO Cox regression. (A) Selection of the tuning parameter ( $\lambda$ ) in the LASSO Cox regression analysis using 10-fold cross-validation via minimum criteria in IIM-ILD patients. (B) LASSO coefficient profiles of 16 candidate predictors. RP-ILD: rapidly progressive interstitial lung disease.

**Supplementary Fig. S2.** Kaplan-Meier survival curves for IIM patients with and without RP-ILD. The cumulative survival rate was significantly lower in IIM patients with RP-ILD than those without RP-ILD (33.3% vs. 94.4%;  $p < 0.001$ ). RP-ILD: rapidly progressive interstitial lung disease.

**Supplementary Fig. S3.** The most valuable predictors of mortality in IIM patients were selected using LASSO Cox regression. (A) Selection of the tuning parameter ( $\lambda$ ) in the LASSO Cox regression analysis using 10-fold cross-validation via minimum criteria in IIM patients. (B) LASSO coefficient profiles of 13 candidate predictors.
