

Supplementary Table S1. Reasons for nintedanib interruption.

Reasons for interruption	Number of patients (%)
Diarrhoea	21 (33.3)
Nausea/ vomiting	13 (20.6)
Reflux	1 (1.6)
Weight loss	6 (9.5)
Abnormal liver function test	3 (4.7)
Other GI abnormalities	5 (7.9)
Other	3 (4.8)

Patients could report more than one reason for interruption. Percentages are calculated based on the total number of patients (n=63). Other GI abnormalities include 2 patients with abdominal cramp, 1 with stomach fullness and 2 patients with constipation. Other include 1 patient with chest pain, 1 patient with palpitation and 1 patient with epistaxis.

**Supplementary Fig. S1.** Patient flow diagram of nintedanib initiation and treatment interruptions.
