
Erratum corrigé

Increased serum levels of microfibrillar-associated protein 4 (MFAP4) are not associated with clinical synovitis in rheumatoid arthritis but may reflect underlying cardiovascular comorbidity

Published in: *Clin Exp Rheumatol* 2020; 38: 122-28.

The authors of this paper wish to report that the MFAP4 concentrations in serum and synovial fluid should be changed from U/L into U/mL throughout the paper. The numerical results and conclusions remain unaltered.
